Creating 'Pre-Combat Veterans' to Win the Fight Tonight

Intelligent Robotic Role Players' (IRRP) for Infantry

USMC End-user Evaluation of 5,895+ shooters concluded that these intelligent robots were a "vast improvement to training modality over existing systems and was value-added in all training events/scenarios." – FY 22 NDAA

Train against an Army of Intelligent Robotic Role Players

Train against robots that look, move and behave like people – all connected with a hive mind. They can see, they can talk, and Artificial Intelligence enables human emotions like fear and anger – and all robots are controlled by a single operator.

USMC has tripled small arms lethality "in just one day." Because it's not about 'marksmanship' – it's all about 'lethality' – and 'winning firefights.' IRRPs are used at 25th ID and 20 other Army Installations -- and at the International Sniper Competition, Best Ranger, and many others.

Shoot robots with live fire, simulated munitions, or lasers. 'Kill' one intelligent robot and the others scatter for cover, or self-organize a swarming autonomous counterattack.

Use robots as a Live Fire Robotic Opposing Force, or as Civilian Role Players in Pattern of Life exercises. Put robots in the LVC, or use them for robotic rifle qualification, or 'impossible training' like overhead fires. IRRPs enable eight entirely new training modes beyond those of trackless moving infantry targets.

And save 85% of the cost of range modernization through ZIRM – Zero Infrastructure Range Modernization.
